HALLIBURTON

Introduction

This document contains important information and last minute changes related to PROFILE™ software version 5000.1.2 that is not documented elsewhere. PROFILE™ software is an application in the Engineer's Desktop™ 5000.1 release, which provides major new functionality in support of the Drilling and Completions applications on the shared EDM™ data model.

The 5000.1.2 release requires that the 5000.1 Engineer's Desktop™ release has already been installed on the system. The 5000.1.2 release will overwrite parts of the 5000.1 release and will add some new files.

Enhancements and New Functionality

The PROFILE™ 5000.1.2 release is an incremental update of the 5000.1 version of the PROFILE™ software release. A number of enhancements and new features have been added for this release.

New features provided with this release include:

- **Sequential Schematics** - Sequential Schematics enable users to display schematics with a large number of components in a neat and easily readable fashion. The Sequential Schematic object allows users to break a schematic down into a number of sections, thereby improving the schematic displayed.

Concentric and Dual completions display sequentially in the Wall Plot, a line appears across the schematic showing where the overlapping equipment occurs or where the second completion begins.

- **Stimulation Treatments** - The Stimulations tab now contains a spreadsheet to enter Treatments data. This allows users to record multiple treatments being used during a Stimulation Job.
- **Workspaces** - Workspaces can now be used to create a group of Wall Plot templates that can be applied to any Design in a specific order.

In addition the following enhancements have been added to this release:

- The Wall Plot Composer's 3D Graph now shows all of the Well's sidetracks, with the current wellbore displayed in blue and all other wellbore paths are displayed in black.
- The Components spreadsheet of the Drillstrings/BHA tab can now be set to automatically calculate the Drill Pipe length. See the “Auto Calculate Drill Pipe Length” topic in the online help.
- A number of enhancements have been added to the Wellbore Schematic Tracks tab, the Sequential Schematic Tracks tab, the Wellhead Schematic Object Properties Tracks tab and the Multi-Lateral Schematic Properties - Tracks tab, including:
 - **Text Wrap Limit** - A text wrap limit has been added to the Tracks tab to reduce overlapping schematic tracks.
 - **Import Schematic Track** - An Import Schematic Track button has been added to allow users to import pre-configured Schematic Tracks from a .STRACK file.
 - **Export Schematic Track** - An Export Schematic Track button has been added to allow users to export pre-configured Schematic Tracks to a .STRACK file. These tracks can then be imported and used in another Wall Plot.
 - **Duplicate Track** - A Duplicate Track button has been added to allow users to make a copy of the selected track.

Sequential Schematics

Often, a Wellbore containing numerous components does not display in the Wall Plot Composer in a neat and easily readable fashion. The Sequential schematic object solves this problem by allowing users to break a schematic down into a number of sections, thereby improving the schematic displayed.

A visual example of the difference between a schematic displayed using the Wellbore Schematic and the same schematic displayed using the Sequential Schematic is outlined below. This example shows a Dual completion, but the Sequential schematic works the same way for Concentric completions as well.

Concentric and Dual completions display sequentially in the Wall Plot, a line appears across the schematic showing where the overlapping equipment occurs or where the second completion begins.

Dual Completion using the Sequential Schematic

Figure 1: Dual Completion as shown using the Sequential Schematic

Alternative methods to add a Sequential schematic to the wall plot page:

- Right-click on the wall plot page, select Schematic > Sequential Equipment from the drop-down menu. Move the cursor to the wall plot page, click and drag an opening for the schematic to be placed on the wall plot.
- Click the Sequential Schematic button () in the Object Toolbar. Move the cursor to the wall plot page, click and drag an opening for the schematic to be placed on the wall plot.

The Sequential schematic object can contain a number of tracks which may include Casing Details, Casing Depths, Wellbore Equipment Depths and other information as well as the drawing itself. A number of different schematic track types are supported. Tracks can be selected using the Tracks tab in the Schematic Object Properties dialog.

Stimulation Treatments

The Stimulations tab now contains an additional spreadsheet to enter Treatments data. This allows users to record multiple treatments being used during a Stimulation Job.

The top spreadsheet provides a means to enter the Stimulation Job. The middle area of the tab provides a means to record one or more Stimulation Treatments that are pumped into the Well for each Stimulation Job. The bottom spreadsheet allows you to enter specific Stages of each Treatment.

Each of these spreadsheets are inter-linked, meaning that you must select a Stimulation Job to view the Treatments used during the Job and you must select a specific Treatment to view the Stages occurring during the Treatment.

The screenshot shows the Stimulation tab in the PROFILE application, which contains three inter-linked spreadsheets:

- Stimulation Jobs:** A table with columns: ST No., Job Date, Contractor, Is Special Job, and Comments. It contains two rows of data.
- Stimulation Treatments:** A table with columns: Time Start, Treatment Type, Stim Type, Interval Top (ft), Interval Base (ft), and Net Stimulated (ft). It contains one row of data.
- Stimulation Stages:** A table with columns: Stage Type, Method, Tool Desc, Interval Top (ft), Interval Base (ft), and Initial Flow Rate (ft³/d). It contains one row of data.

| ST No. | Job Date | Contractor | Is Special Job | Comments |
|--------|------------|-------------|-------------------------------------|----------|
| 1 | OH 11/11/2 | HALLIBURTON | <input checked="" type="checkbox"/> | |
| 2 | OH 10/27/2 | | <input type="checkbox"/> | |

| Time Start | Treatment Type | Stim Type | Interval Top (ft) | Interval Base (ft) | Net Stimulated (ft) |
|---------------------|----------------|-----------|-------------------|--------------------|---------------------|
| 11/22/2008 12:00 AM | ACID TREATMENT | ACID WASH | 6,400.0 | 6,700.0 | |

| Stage Type | Method | Tool Desc | Interval Top (ft) | Interval Base (ft) | Initial Flow Rate (ft³/d) |
|------------|----------|----------------------------------|-------------------|--------------------|---------------------------|
| CIRCULATE | CHEMICAL | UNIBEADS AND BENZOIC ACID FLAKES | 6,500.0 | 6,600.0 | |

Figure 2: Stimulations Tab in the PROFILE™ application

Workspaces

In the PROFILE™ application, workspaces are used to create a group of Wall Plot templates that can be applied to any Design in a specific order.

Note:

Workspaces in the PROFILE application perform much the same way as they do in the WELLPLAN™ application, but are different than the WELLPLAN Workspaces.

Workspace Folder

Prior to creating a Workspace a location where the Workspaces will reside must be defined. The location is defined using the **Edit > Workspace Folder** command and entering the location.

Workspace Folder Notes:

Local drives, mapped network drives and UNC paths are supported.

The Workspace folder defined must already exist. The PROFILE application will not create the folder.

The user must have permission to change the registry setting HKEY_LOCAL_MACHINE\Software\Landmark\EDT\5000.1\Profile string value Workspace Folder. By default, most users should have permission.

In the case of a Citrix environment, the Citrix Administrator may have to set the Workspace folder for the Citrix PROFILE users.

Caution: If the Workspace Folder location has been set by the Administrator in a Citrix environment, check with them before changing it, as you may affect other users.

Working with Workspaces

Workspaces are created when a group of existing Wall Plots is saved using the **View > Tabs > Save Workspace** command. Each Wall Plot is saved to an individual .PPC file in a folder named for the workspace. For example, the following screenshot shows the files that make up a Workspace called “Completion”. This workspace contains 4 pre-defined Wall plots BHA Summary 2, Directional Completion, Wellhead Summary and Summary. A .PPC file appears for each of the defined Wall Plot templates.

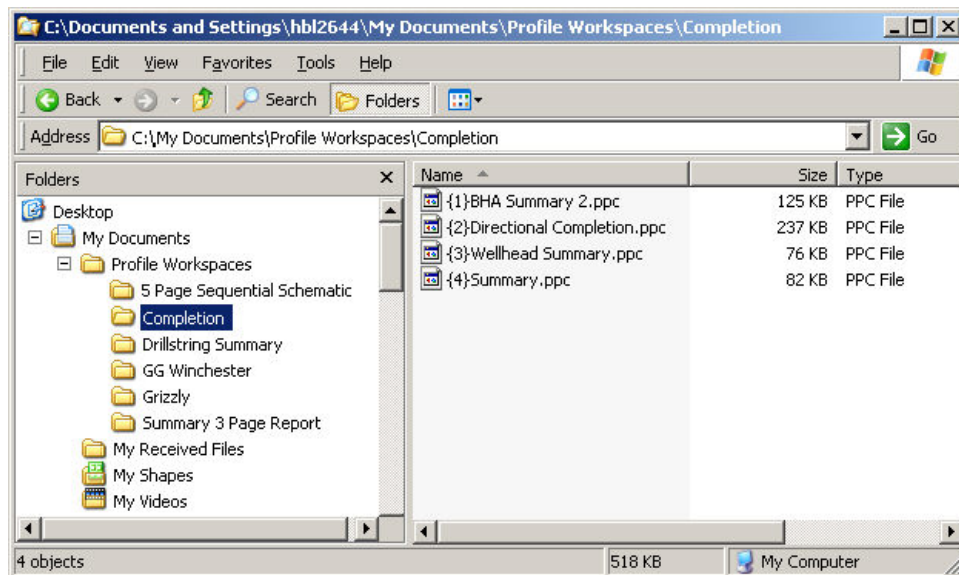

Figure 3: Workspace and the template Wall Plots.

Notice the numbering on the Wall Plot file names. This numbering defines the order in which the Wall Plot will appear in the application.

If a user were to apply the sample Workspace shown above to an open Design, the four Wall Plot templates would be applied to the Design.

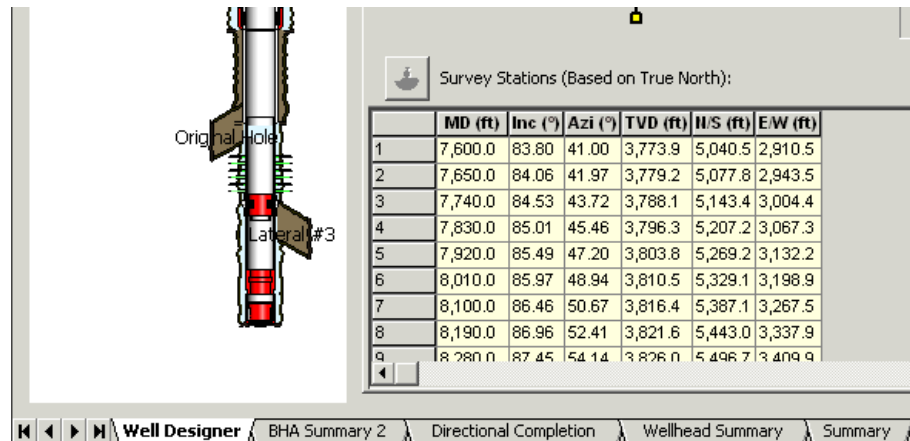

Figure 4: Sample “Completions” Workspace applied to a Design. Notice each of the Wall Plot templates that have been applied to the Design.

The number appearing before the .PPC file indicates the order in which the Wall Plots appear in the design.

Problems Fixed

The following problems were either fixed or have workarounds for the 5000.1.2 release.

| Defect | Description | Version | Comp Level 1 | Comp Level 2 |
|--------|--|-------------|----------------------|-------------------------|
| 726251 | Need additional equipment components supported for certain Section Types | 2003.14.1.0 | Well Designer | Wellbore/Completion Tab |
| 730570 | Depth Reference Datum Shows -0.00ft Air Gap | 2003.14.1.0 | General | |
| 731481 | Need to be able to include Change History as a data box in a profile template | 2003.16.0.0 | Templates/ Frames | |
| 732918 | Would like to filter schematic content by Section & Component type same as Wellbore Equipment track | 2003.16.0.0 | Wall Plot Composer | Schematic Object |
| 733264 | No symbol available for solid block xmas trees - UPDATE: symbols are created - need to be put into the install | 2003.16.0.0 | Symbols | |
| 738481 | Incorrect schematic after installing wellbore equipment components (transfer) | 2003.16.0.0 | Well Designer | |
| 741746 | Manual text entries being overwritten by value from picklist | 2003.16.0.1 | Well Designer | Wellbore/Completion Tab |
| 744640 | Chinese Locale: Invoking Event Properties dialog in FOT/Profile causes Uncaught Java exception and crash | 2003.21.0.0 | Core App | Well Explorer |
| 745088 | Casing Design copy from Actual Design to a different Prototype Design does not show Casings at the Prototype Design | 2003.21.0.0 | Core App | Well Explorer |
| 746242 | Need to store the symbol width setting with a schematic | 2003.16.0.1 | Wall Plot Composer | |
| 748665 | Profile:Casing Jewelry column is not showing selected fields information. If we add any field it is showing only blank. | 2003.21.0.0 | Wall Plot Composer | Data Tracks |
| 749429 | Stimulation Stage Comments fields is required for Wall Plot Composer in Profile. Currently there is no way to see Stimulation Stage Comments in Profile. | 2003.21.0.0 | Wall Plot Composer | Data Tracks |
| 750368 | PROFILE - Drillstrings should show Bit number in assembly spreadsheet. | 2003.14.1.0 | Well Designer | Drillstrings/BHA |
| 751122 | 751122, Request capabilities to auto calculate Drill Pipe length in Profile Drill strings/BHA spread sheet as individual BHA Component length is changed | 2003.21.0.0 | Well Designer | Drillstrings/BHA |
| 751906 | Separator Properties has no effect on Schematic | 2003.21.0.0 | Wall Plot Composer | Data Tracks |

| Defect | Description | Version | Comp Level 1 | Comp Level 2 |
|--------|---|-------------|------------------------|-------------------------|
| 726251 | Need additional equipment components supported for certain Section Types | 2003.14.1.0 | Well Designer | Wellbore/Completion Tab |
| 751911 | Changing Label properties of Line Data for Plan All Wellbores plot has no effect on graph and the entered Label is gone next time the Properties dialog is opened | 2003.21.0.0 | Wall Plot Composer | |
| 753100 | Profile has no default symbols for Adj. Near Bit Reamer and Core Barrel | 2003.21.0.0 | Symbol Management | Symbol Mappings Editor |
| 753305 | In Mapped Symbols Update button does not call for Save action and hence Symbols cannot be saved | 2003.21.0.0 | Symbol Management | |
| 755539 | Live schematic displays differently on change of active unit system | 2003.16.1.2 | Well Designer | Interactive Schematic |
| 756839 | Umbilical functionality unstable. | 2003.16.1.2 | Well Designer | |
| 756880 | WPC Schematic Toolbar Problem | 2003.21.0.0 | Wall Plot Composer | |
| 757405 | Installed Tieback Packer causing design to become crooked when it is not a dual-completion | 2003.16.0.2 | Well Designer | Interactive Schematic |
| 757557 | Comp Type Code Default Behavior for Centralizer Jewelry | 2003.21.0.0 | Well Designer | Casing Tab |
| 758023 | Wallplot Composer tab: Wellhead Hangers Data Track is not showing data for Single Schematic Drawing. It is showing data only for Wellhead Schematic Drawing. | 2003.21.0.0 | Wall Plot Composer | Data Tracks |
| 758350 | Need a Formations databox in WPC | 2003.16.1.2 | Well Designer | Trajectory Tab |
| 758583 | Wrong formation texture being drawn in WPC | 2003.16.1.2 | Well Designer | Trajectory Tab |
| 758748 | String Component Item Description created from Catalogue selection does not include Unit Labels | 2003.21.0.0 | Unit Management System | |
| 759525 | Profile invalid state This Section > Total Number of Sections | 2003.16.1.4 | Wall Plot Composer | Schematic Object |
| 760770 | Length from Catalog selection does not update MD Landed on the fly and schematics not correct | 2003.16.1.4 | Well Designer | Wellbore/Completion Tab |
| 762961 | Wall Plot Composer Days v. Depth graph functionality | 2003.14.1.0 | Wall Plot Composer | |
| 764203 | Need support for BHA Program data box in Wall Plot Composer | 2003.21.0.0 | Wall Plot Composer | Data Box Object |
| 764631 | Default.ppc Template specifies Drilling on last day of Completion Event. | 2003.16.0.5 | Wall Plot Composer | Data Box Object |

| Defect | Description | Version | Comp Level 1 | Comp Level 2 |
|--------|--|------------------|----------------------|--|
| 726251 | Need additional equipment components supported for certain Section Types | 2003.14.1.0 | Well Designer | Wellbore/Completion Tab |
| 765894 | Component Install Date should default to the Install Date for the assembly. | 2003.21.0.0 | Well Designer | Wellhead Tab |
| 765945 | Profile does not show the name of the Drill string/Work String in Data Quality Date Ranges tab | 2003.21.0.0 | Well Designer | Drillstrings/BHA |
| 767408 | Java Exception when trying to copy/paste PROFILE Template | 2003.16.0.4 | Core App | Well Explorer |
| 778782 | Enhancements to support StatoilHydro evaluation of Profile. | 2003.16.1.6 | Wall Plot Composer | Schematic Object |
| 781985 | User can not select Zone Name in Wellbore Openings data box in Profile | 2003.16.0.6 | Wall Plot Composer | Data Box Object |
| 783392 | Tubing Hanger Assembly picklists need to show more description of each assembly - should list by Assembly Name (Current Status). | 2003.21.0.1 | Well Designer | Wellhead Tab |
| 784439 | Well Designer, Well Plot shows sidetracks not yet kicked off | 2003.21.0.0 | Core App | |
| 784780 | Show Wellbore Properties fields in WPC Data Box | 2003.22.0.0 | Wall Plot Composer | Data Box Object |
| 786799 | The top of the casing in the 9 5/8" casing string below the casing hanger has be | 2003.16.1.8 | Well Designer | |
| 789647 | The cement overlaps the hole and some of the casing/ casing equipment. | 2003.16.1.8 | Symbols | |
| 790976 | PROFILE Stimulation Display Issue | 2003.16.0.1 | Core App | Date Bar |
| 792417 | Invalid Data QA errors displayed for Hole Section & Sidetracks due to MD | 2003.16.0.3 | Well Designer | Hole Sections Tab |
| 793123 | Enhancement - Make Section, Township, and Range available in Profile | 5000.1.0.0 | Wall Plot Composer | Data Box Object |
| 793169 | Top of cement not correctly showing in track for 9 5/8" intermediate casing | 2003.16.1.1 2 | Well Designer | Interactive Schematic |
| 797107 | Font colouring is not preserved with template | 2003.16.1.1 4 | Templates/ Frames | |
| 797605 | When you attempt to create or load a workspace prior to setting the workspace folder you do not get a message and nothing happens. | 5000.1.2.0 | Wall Plot Composer | General Wall Plot Composer Functionality |

HALLIBURTON

Introduction

This document contains important information and last minute changes related to PROFILE™ software version 5000.1 that is not documented elsewhere. PROFILE software is an application in the Engineer's Desktop 5000.1 release, which provides major new functionality in support of the Drilling and Completions applications on the shared EDM™ data model.

System Requirements

For details, refer to the ‘System Requirements’ section of the *Engineer’s Desktop™ Drilling Software Version 5000.1 Summary Level Release Notes*.

Third Party Software

Landmark uses various third-party software applications in the development of its software.

Landmark acknowledges that certain third party code has been bundled with, or embedded in, Landmark's software. The licensors of this third party code, and the terms and conditions of their respective licenses, may be found at the following location:

[Installldir]\Documentation\Third_Party.pdf.

Refer to the *Engineer's Desktop™ Drilling Software Version 5000.1 Summary Level Release Notes* to view a table describing a complete list of the third-party applications that are in Engineer's Desktop software release 5000.1.

International Trade Compliance

This application is manufactured or designed using U.S. origin technology and is therefore subject to the export control laws of the United States. Any use or further disposition of such items is subject to U.S. law. Exports from the United States and any re-export thereafter may require a formal export license authorization from the government. If there are doubts about the requirements of the applicable law, it is recommended that the buyer obtain qualified legal advice. These items cannot be used in the design, production, use, or storage of chemical, biological, or nuclear weapons, or missiles of any kind.

The ECCNs provided in Release Notes represent Landmark Graphics' opinion of the correct classification for the product today (based on the original software and/or original hardware). Classifications are subject to change. If you have any questions or need assistance please contact us at <mailto:FHOUEXP@halliburton.com>

Under the U.S. Export Administration Regulations (EAR), the U.S. Government assigns your organization or client, as exporter/importer of record, responsibility for determining the correct authorization for the item at the time of export/import. Restrictions may apply to shipments based on the products, the customer, or the country of destination, and an export license may be required by the Department of Commerce prior to shipment. The U.S. Bureau of Industry and Security provides a website to assist you with determining the need for a license and with information regarding where to obtain help.

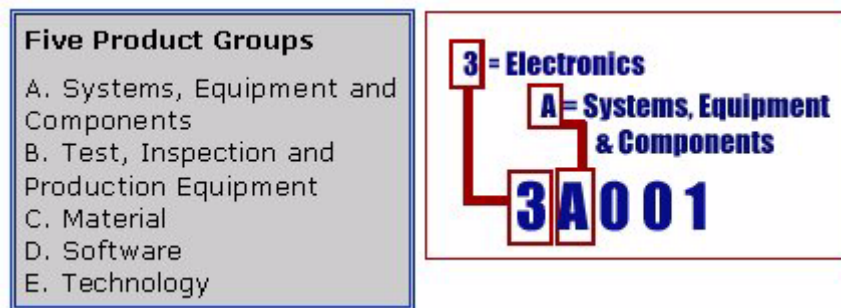

The URL is: <http://www.bis.doc.gov>

Definitions

CCATS (Commodity Classification Automated Tracking System) - the tracking number assigned by the U.S. Bureau of Industry and Security (BIS) to products formally reviewed and classified by the government. The CCATS provides information concerning export/re-export authorizations, available exceptions, and conditions.

ECCN - Export Control Classification Number - The ECCN is an alpha-numeric code, e.g., 3A001, that describes a particular item or type of item, and shows the controls placed on that item. The CCL (Commerce Control List) is divided into ten broad categories, and each category is further subdivided into five product groups.

The CCL is available on the EAR Website at http://www.access.gpo.gov/bis/ear/ear_data.html#ccl

Installation

Refer to the “Installation” section of the *Engineer’s Desktop™ Drilling Software Version 5000.1 Summary Level Release Notes*.

IMPORTANT:

- EDT™ 5000.1 software is a new product. If you are currently using an EDM database version that is 2003.14 - 5000.0.0, you must install 5000.1, then upgrade your database using the new Multi-Version Database Upgrade Utility (EDMPatchDB.exe).
- EDT 5000.1 applications can co-exist with previous versions of EDT applications on the same machine. However, LAM 5000 **will not** co-exist with previous versions of LAM (FLEXlm license server) on the same machine. Previous versions of LAM **must be uninstalled** before you install the 5000.1 release. To run EDT 5000.1 applications and a previous version of the EDT applications on the same machine, you must point one or both versions of EDT software to a LAM server located on a remote machine, since only one LAM server can run locally.

Refer to the *EDT™ Drilling Software Installation Guide* for complete details.

Licensing

There have been significant changes to licensing for the 5000.1 release. For details, refer to the Licensing section of the *Engineer's Desktop™ Drilling Software Version 5000.1 Summary Level Release Notes*.

Database Upgrade (SQL Server 2005, SQL Server 2005 Express, and Oracle)

Refer to the “Upgrading the Database” section of the *Engineer’s Desktop™ Drilling Software Version 5000.1 Summary Level Release Notes* for information on upgrading your EDM database to the 5000.1 version.

You must upgrade your existing EDM database(s) BEFORE using 5000.1

You must upgrade versions of your database(s) created with earlier versions of the software before running the 5000.1 software.

Enhancements and New Functionality

The 5000.1 release of Engineer's Desktop™ software supports the Microsoft Vista operating system, has new LAM (FLEXnet Publisher) licensing—including the Mobile Checkout utility which gives you the ability to “borrow” a license for offsite work—and contains some critical bug fixes.

In addition, the following enhancements were added to the PROFILE 5000.1 software release.

- Sub Assemblies are now supported within PROFILE software. This allows for portions of a Completion String (i.e., the Sub Assembly) to be planned independently and then inserted into the overall wellbore equipment string.
- Added or enhanced content of Data Boxes for the following objects:
 - Sub Assemblies
 - Wellbore Details for Multi-Lateral Wells
 - Perforations
 - Cementing
 - Reference Datums
 - Wellbore Formations/Wellbore Zones
 - Wellbore Equipment Details
 - Wellhead Equipment
 - Casing Assembly Details
 - Well Summary
 - Hole Sections
 - Mud Program
 - Well Remarks
 - Stimulations
 - Wellbore Openings
- Other Data Track and Data Box enhancements to Wall Plot Composer
 - allow sorting of components in Wellbore Equipment Details and Casing Details
 - allow insertion of current date/time
 - allow control of decimal places
 - filter out cement that has been drilled out
 - multiple pages of a PPC can be grouped and printed out at once

Sub Assemblies

A Sub Assembly is a sub-set of the completion assembly. It is made up of a group of adjacent tools, provided by a single service company, that are constructed, assembled, tested and then sent to the Well site to be installed with other Sub Assemblies. Engineers designing and installing completion assemblies need to be able to manage completion make-up by Sub Assembly.

To address this, PROFILE software now contains a Sub Assembly tab. This tab allows users to build a Sub Assembly from a list of components, using the same methods available to the Wellbore Equipment tab (i.e., drag/drop, manual entry and/or catalog integration). Jewelry and Umbilical properties are also available from the Sub Assembly tab. Users can add and edit Sub Assemblies or use the Sub Assembly Library to Import or Export Sub Assemblies.

The Sub Assembly tab displays a visual representation of the selected Sub Assembly string in the Well Designer tab and allows for the collection of Sub Assembly data, such as:

- name,
- number,
- number of sub assemblies delivered,
- identify the primary Sub Assembly run (in the case where more than one is delivered),
- the vendor who provided the Sub Assembly, along with their contact details,
- comments,
- and installation instructions.

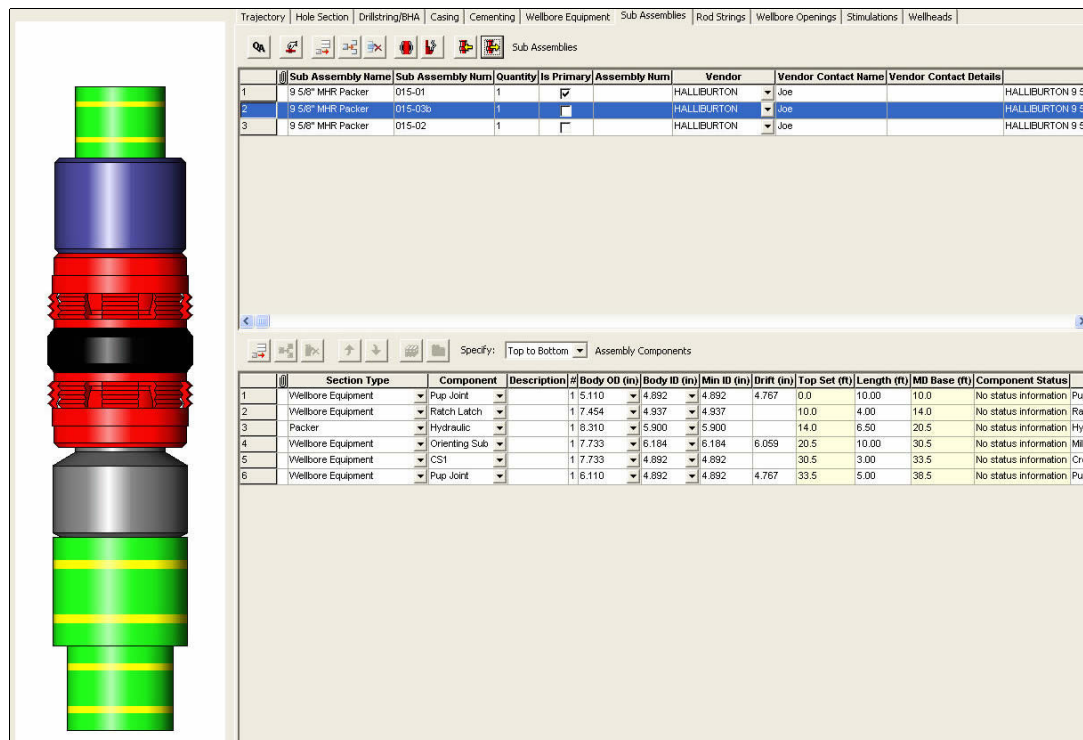

Figure 5: Sub Assembly Tab in PROFILE Software

Sub Assemblies in the Wellbore Equipment tab

In the Wellbore Equipment tab, a Sub Assembly can be inserted or added to the end of the string using the *Add Sub Assembly* button () and the *Insert Sub Assembly* button () located in the

Component Details spreadsheet. PROFILE software does *not* allow components to be added to the middle of an existing Sub Assembly.

The *Sub Assembly mode* button (), in the Wellbore Equipment tab, allows users to see what components belong to each Sub Assembly. Each Sub Assembly is highlighted in a different color. Components that are not part of a Sub Assembly are highlighted in grey.

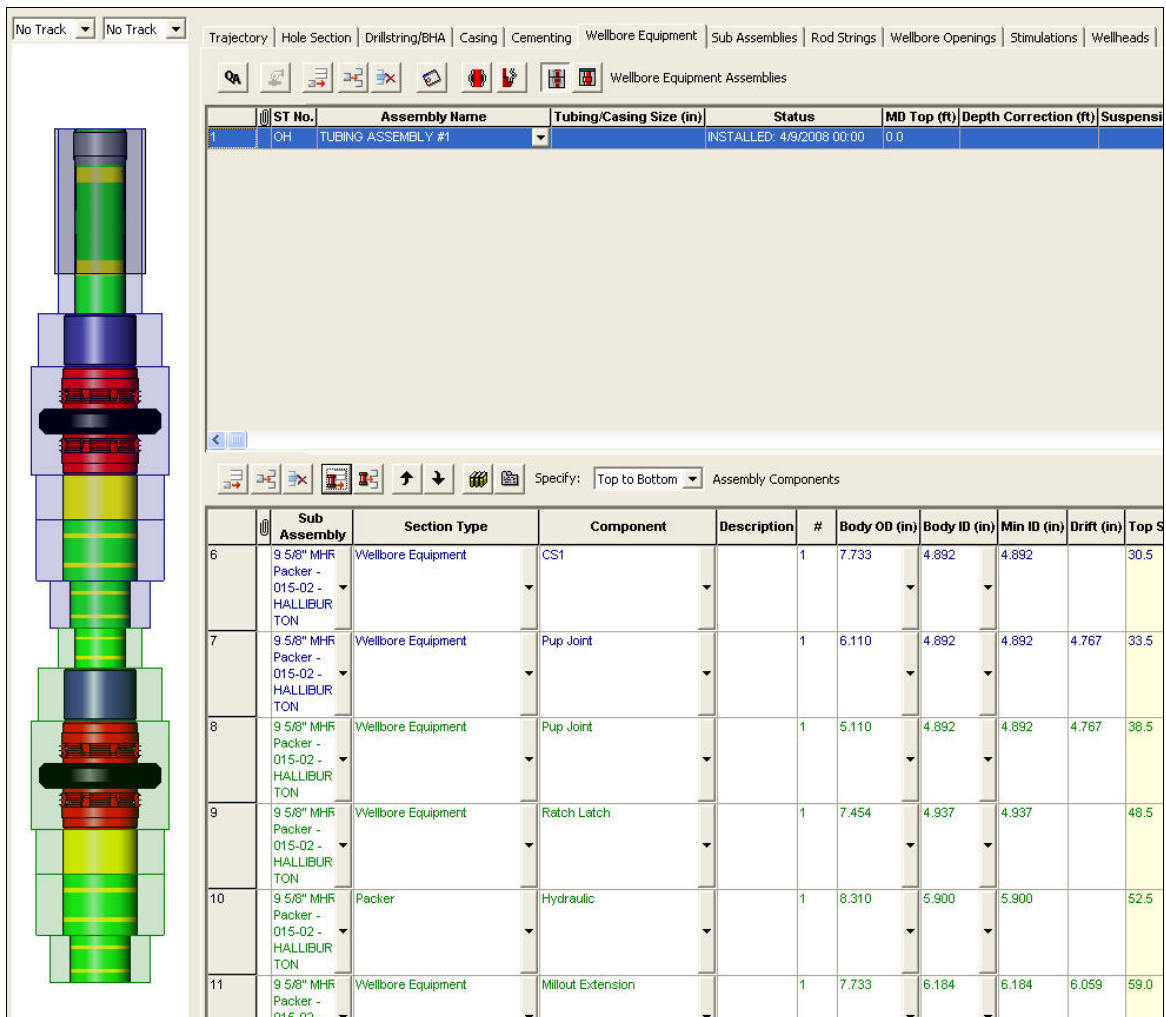

Figure 6: Schematic showing two sub assemblies; one in blue and one in green

When this mode is turned on, users can click on adjacent components and create a Sub Assembly from in the Wellbore Equipment tab. This can be accomplished by selecting a number of adjacent components, right-clicking on the components and selecting the *Create New Sub Assembly* command from the menu that appears.

Once created users can click the *Sub Assembly* button () at the top of the Wellbore Equipment tab; select the new Sub Assembly; and click the *Copy to Sub Assembly Tab* button () to add the Sub Assembly to the Sub Assembly tab to use it in building more Wellbore Equipment strings.

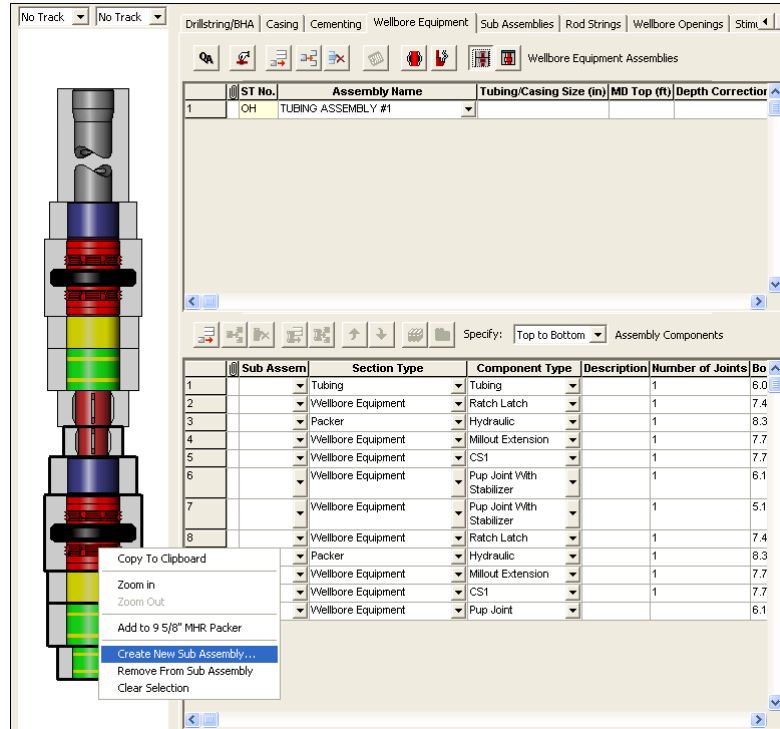

Figure 7: Select Components to create new Sub Assembly

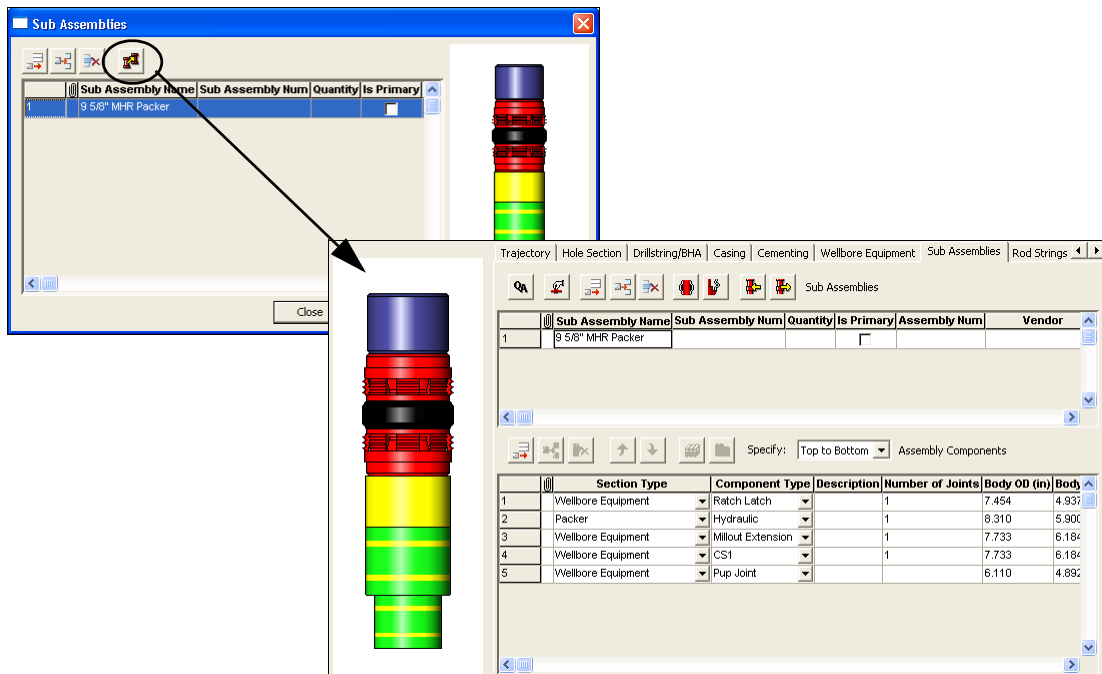

Figure 8: Click Copy to Sub Assembly Tab button to add new Sub Assembly

Sub Assemblies can be added to the Wall Plot Composer using the Wall Plot Composer's Object Toolbar. A schematic of all components supported in the Sub Assembly can be added using the *Sub Assembly Object* button () and tracks can be added using the *Data Box* button (). An example of a Sub Assembly Wall Plot Composer layout (*SubAssembly.ppc*) is included with the installation. By default, this file is located in the <5000.1 install directory>\Profile folder.

Figure 9: SubAssembly.ppc sample

Wellbore Equipment tracks can be configured to highlight Sub Assemblies in the Wall Plot Composer.

Figure 10: Sub Assembly components highlighted in the Wall Plot Composer

Data Box Enhancements

Several fields have been added to Data Boxes to support more Wellbore details. Additionally, the following new Data Boxes are now available for Perforation tracks: Planned Cement Program, Mud Program, Well Remarks, Wellbore Formations and Wellbore Zones within Perforation tracks.

Users can also filter cement that has been drilled out, control decimal places on numeric fields in data tracks and control detailed string component sorting.

Multi Page printing

PROFILE software now allows users to print multiple pages of a PPC file at one time. By default, this feature is turned off. It can be enabled through the *File > Enable Multi-Page Printing* menu command.

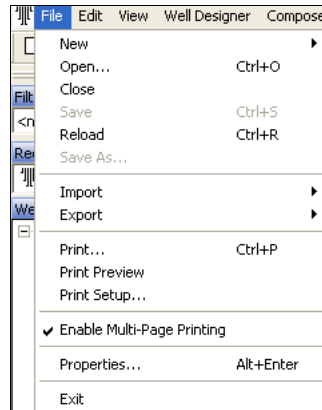

Figure 11: Enable Multi-Page Printing command

PROFILE software notifies the user if any pages are set to different printer page size and verify scaling options.

New Completion Symbols

Four new completion symbols are now available in PROFILE software. These symbols were developed in conjunction with the Halliburton Completions Engineering team.

Figure 12: New Completion symbols

Common Well Explorer Enhancements

For this release, the Common Well Explorer includes the following enhancements:

- Well Explorer added to the Real-Time View™ application with the following special features:
 - New icons added for log () and log curves (). Logs can now be opened from the right-click menu command on the Log icon in the Well Explorer.
 - Drag and Drop individual log curves onto the log viewing area
 - ASCII, LAS (Time), and LAS (Depth) log import from the Wellbore level right-click menu
- Location Tab added to Well Properties dialog, with additional information added to the Location Tab on the Site Properties dialog
- Temperature Deration, Anistropic Radial Yield, and Anistropic Hoop Yield moved from Material Properties to Grade Properties
- XML import/exports enhanced to not carryover unnecessary tubular properties that are not used by corresponding assemblies
- License Expiry option now available, configured through the LAM Environment variable.
- Password Expiry option now available for EDM software users, configured through the EDM Administration Utility.
- Ability to import/export WITSML 1.2.0 and 1.3.1 files via COMPASS™ and OpenWells® software.
- For more information, see the online Help for the OpenWells COMPASS applications.
- Catalogs were added for Well Completion components, and support for these catalogs was added to the OpenWells, PROFILE, WELLPLAN™, and Catalog Editor applications.
- Added EDM Security > Users node > Sort Users right-click menu command to the EDM Administration Utility. EDM Administrators can now sort users by User Name or Full Name. For more information, see EDM Administration Utility Help.

Problems Fixed

The following problems were either fixed or have workarounds for the 5000.1 release.

| | |
|--------|---|
| 728578 | Performance issue - Lesson Properties |
| 722519 | Event Objective 2 in Well Explorer Event Properties dialog is empty |
| 772396 | Can not hide the Wall Plot Composer toolbar, deselecting the Wall Plot Composer toolbar option from View menu is not hiding the WallPlot Composer toolbar and it is hiding the Schematic Options toolbar. |
| 783711 | Easting value is displaying wrong and Longitude value is not displaying in Profile, Well Properties |
| 730571 | Blank Datum Elevation Record |
| 771642 | Clone of 762750 -PROFILE, custom SI catalogs, column sorting is messed up |
| 783365 | Survey data inconsistent between PROFILE and COMPASS applications |
| 758680 | Need to be able to copy and paste components between assemblies |
| 770533 | Licensing - EDT software Licensing does not take advantage of the functionality that will warn users that their license is set to expire in x days |
| 759703 | PROFILE software connects Umbilicals to wrong components if Components have same Item Description; hooking up to Item Description Name and not Id |
| 772693 | Output Report preview list on Date Bar displays the incorrect report name |
| 741064 | Symbol Map - need to introduce application security token to control access. Most users will not be customizing Symbol Maps. |
| 723768 | Drawings are distorted if repeat symbols have not been defined. Message in Data Quality window would help with finding this problem. |
| 731492 | PROFILE software should report max dogleg, inclination and azimuth in a data box |
| 702512 | CD_CEMENT_FLUID data should be available in Profile as a track or data box. |
| 731482 | Well Status should be available as a data box in PROFILE template |
| 759376 | Unable to see data on a custom template for Wellhead data. |
| 758116 | Need ability to sort Component Order on Wellbore Equipment Details, Wellhead Equipment, Casing Assembly Details tables |
| 758114 | Unable to remove Time portion of Date/Time Value |
| 758346 | Need Cement Slurry Date available in Cementing Databox. |
| 758117 | Need Zone, Reservoir and Formation supported in Perforation Intervals data box |
| 777246 | Filter out cement that has been drilled out in the cement intervals track |
| 782033 | PROFILE software out of memory and poor performance when wellbore openings overlap |
| 780801 | Add TVD Current, Sacks Used, Cement Grade to Data Box |

| | |
|--------|--|
| 764202 | Need support for Mud Program data box in WPC |
| 759908 | With large number of Well bore EQ's and with the new Split Section feature, opening a WPC shows the entire Completion assembly instead of X out of Y |
| 771371 | WPC tab, Tool Tip text is not displaying for buttons in Schematic Object Properties dialog. |
| 741749 | Need Wellbore Details data table for multi-lateral summary for the Well |
| 740702 | OpenWells data missing from PROFILE Data Box & Tracks |
| 742868 | Material value in Component Properties not available under Wellbore Equipment Details |
| 742444 | Font scaling problems in wall plots |
| 731557 | Need a selection criteria to select only specific items into data boxes e.g. Reference Datum Boxes |
| 728751 | PROFILE software must show wellbore formations and wellbore zones from the perforation report |
| 732997 | Need to be able to specify decimal precision on numeric fields on tracks and data boxes. |
| 732920 | Need ability to group PPC pages into a Template |
| 716527 | Component TVDs & Inc not available in WPC Wellbore Equip Assembly Component Details data box |
| 700055 | Need to add support for outputting current date/time to WPC formats |
| 622114 | Need WPC data box support for the Well Remarks table |
| 746220 | Lithology wont show up unless both top and bottom depth information is entered. |
| 700054 | Need the ability to differentiate planned & actual Formations/Lithologies |
| 726272 | Need support for completion sub-assemblies |
| 701000 | Sub-Assembly Support: need ability to copy other assembly in Design into current assembly (merge). |
| 755077 | Enhance support for Stimulations data |
| 755075 | Enhance support for Wellbore Openings |
| 755492 | Need to hook Help ID to Assembly Status Dialog topic |
| 755541 | Tabs displaying skewed on data box in WPC |
| 758347 | WPC Perforations Data Box - Cannot access header fields in master detail |
| 729939 | PROFILE software does not handle Depth Correction in Interactive Schematic and WPC for Casing and Wellbore Equipment's |
| 755062 | Support additional Assembly Component fields |
| 751023 | Need to segregate Formations by Design |
| 746229 | Want to be able to select either prognosed depths or actual depths |
| 749109 | Catalog selection windows should be re-sizable |

- 746240 Add the caption label to the tracks listed in the schematic track properties.
- 743429 Extend PROFILE Actual Design Support to create Report Headers
- 749109 Catalog selection windows should be re-sizable
- 746240 Add the caption label to the tracks listed in the schematic track properties.
- 752498 Umbilicals Component Selection Picklist should show MD Top of each Tool listed for better differentiation

Known Problems

The following are known problems for the Engineer's Desktop 5000.1 software release.

| | |
|--------|--|
| 744204 | Need support for recording and rendering cellar geometry and schematics for land wells |
| 750149 | Need a comment field for Umbilicals and Jewellery |
| 746244 | Long casing components only stretch when the number of joints is 0 or Null. |
| 741740 | Need Drag & Drop support for copy/paste of Wellheads between Designs |
| 741741 | Perf Status display issue when you have overlapping Perfs |
| 741065 | Wellbore Equipment Depths Track should support interpolated inclination and other directional parameters |
| 741737 | Need electronic import support for Surveys |
| 744201 | Need WPC template that fits all printers |
| 741750 | need spreadsheet import feature same as OpenWells software for Wellbore Equipment |
| 742088 | PROFILE spreadsheets don't support keyboard Delete button or right-click Delete menu item |
| 781413 | Attachments can not Open/Delete/Save As from the Date bar Attachments dialog if we minimize the ADV. |
| 781410 | PROFILE software: Virtual Folder attachments are opened blank. |
| 781521 | We can add new Wellbores in Profile using Insert key after Revoking 'EDM.Wellbore.add' token also. |
| 776624 | OpenWells software vs PROFILE software: ADV, Right click menu item 'Save As' is always disabled for attachments. |
| 774962 | Accessing Properties for the Database node by shortcut key (Alt+Enter) is not working. |
| 778456 | change the label "locked" on the Event properties to be consistent with other levels |
| 783972 | Launching Help from Sub Assembly button doesn't work properly |
| 783531 | PROFILE software, Symbol Manager, Sketch Mode, disable the Options item in View menu. Currently it is enabled and selecting Options is not showing Options dialog. |
| 782062 | Cannot copy a subassembly from one design to another |
| 781965 | Drag & Drop vs. Spreadsheet - Deleting rows. |
| 781972 | PROFILE software, Hole section, data is not updating properly once its get dirty with bad data |

DE 784301 Workaround

The Symbol Mappings - Save As feature gives an error message regarding the folder location. By default, PROFILE software points to an EDT_2003_16 folder.

To workaround this issue change the User (Local) folder location in the Symbol Folder dialog.

This dialog can be accessed from the Symbol Manager's **Edit > Symbol Folder** menu command.

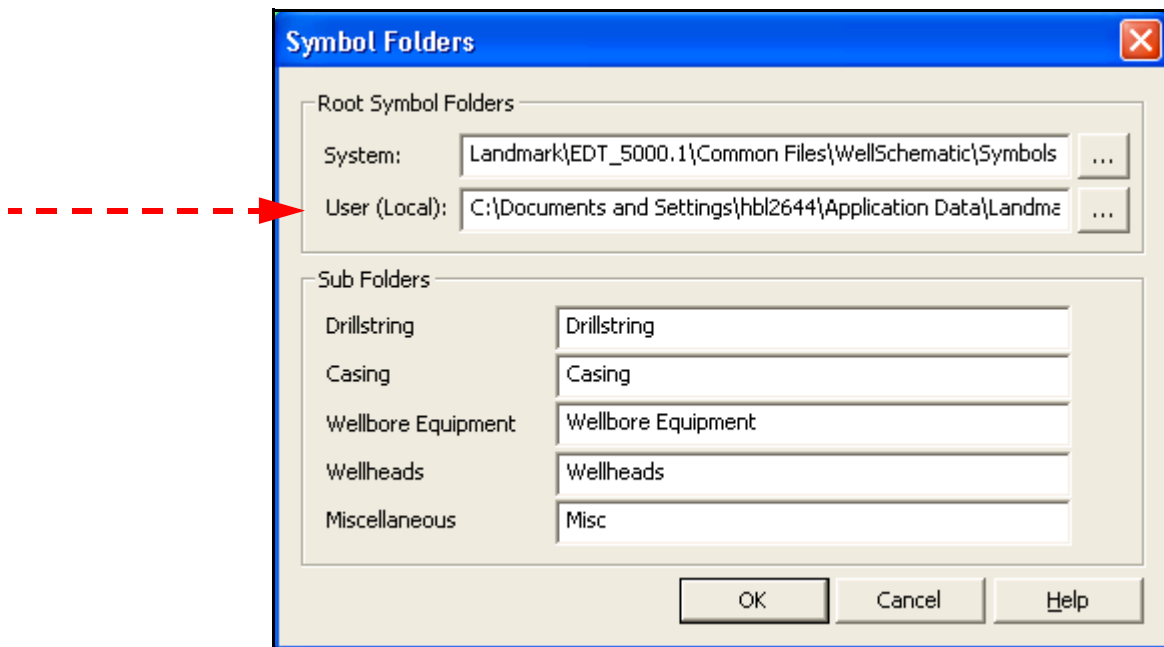

Figure 13: Symbol Folders dialog

Contacting Support

Landmark operates Technical Assistance Centers (TACs) in Australia, the United Kingdom, and the United States. Additional support is also provided through local support offices around the world. Local support office information is listed below. If problems cannot be resolved at the district level, our escalation team is called to resolve your incidents quickly.

Support information is always available on the Landmark Graphics Support internet page located at: <http://css.lgc.com/CustomerSupport/CustomerSupportHome.jsp>.
